## JavaScript – Ex4 – Good Restaurant

---

The following exercise contains the following subjects:

- ◆ JavaScript

### Instructions

Write a program that recommends a good restaurant in Tel Aviv.

Ask the following questions:

1. How many people are you going with? (int value)
2. Should it be Kosher? (y/n question)
  - a. If it is Kosher, should it be Kashrut Lemehadrin? (y/n question)
3. What kind of food do you want? (use the method `keyInSelect` from the `readlineSync` library to show a few options. Google it on how it works.)

Feel free to recommend your own favorite restaurants!

**Special instructions:** In case you received an answer you didn't expect (char in the place of an int or the other way around) – exit the program after logging an error message. Use: throw “stop execution” to exit the program.

Submit the file to Hive.
